MaxMind Fraud Detection Plugin for Shopware

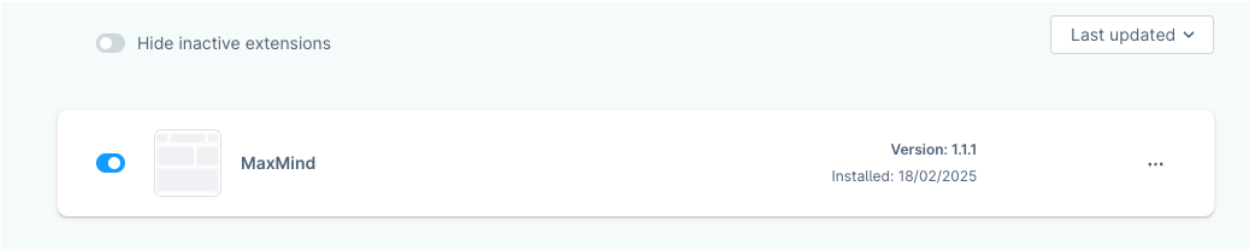
Version: 1.1.1

Introduction

The MaxMind plugin integrates MaxMind's fraud detection service into your Shopware store. It automatically calculates a fraud risk score for each order and can set the order status to "Fraud Review" if the score exceeds your configured threshold.

1. Installation & Activation

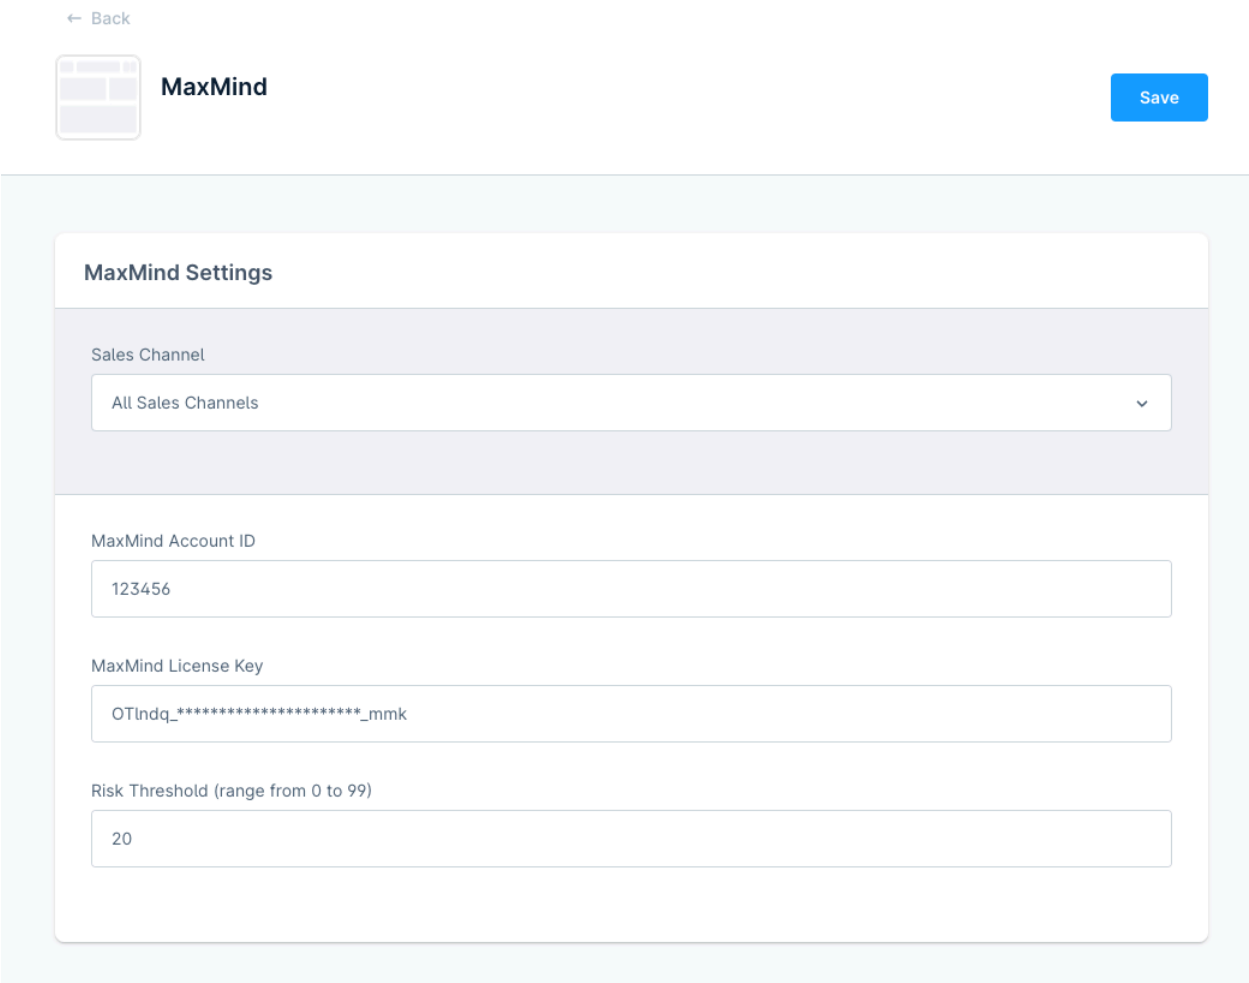
1. **Download and Install**
    - In your Shopware Admin, go to Settings > System > Plugins.
    - Upload or install the "MaxMind" plugin.
    - Once installed, toggle the plugin to activate it.
2. **Verify Installation**
    - After activation, you will see MaxMind in the list of installed plugins.
    - The plugin name, version, and installation date should appear as shown in the screenshot below.



2. Plugin Configuration

1. **Access Plugin Settings**
    - Go to Settings > System > Plugins.
    - Locate MaxMind and click the ... icon or the plugin name to open its settings.
2. **General Settings**
    - Sales Channel: Select the sales channel(s) where you want MaxMind to be active. If you choose "All Sales Channels," it will apply to every channel in your store.
    - MaxMind Account ID: Enter the Account ID provided by MaxMind.
    - MaxMind License Key: Enter the License Key from your MaxMind account.
    - Risk Threshold (0 to 99): If an order's risk score exceeds this threshold, the order status is set to Fraud Review.

3. **Save Configuration**
    - Click Save in the top-right corner to store your settings.



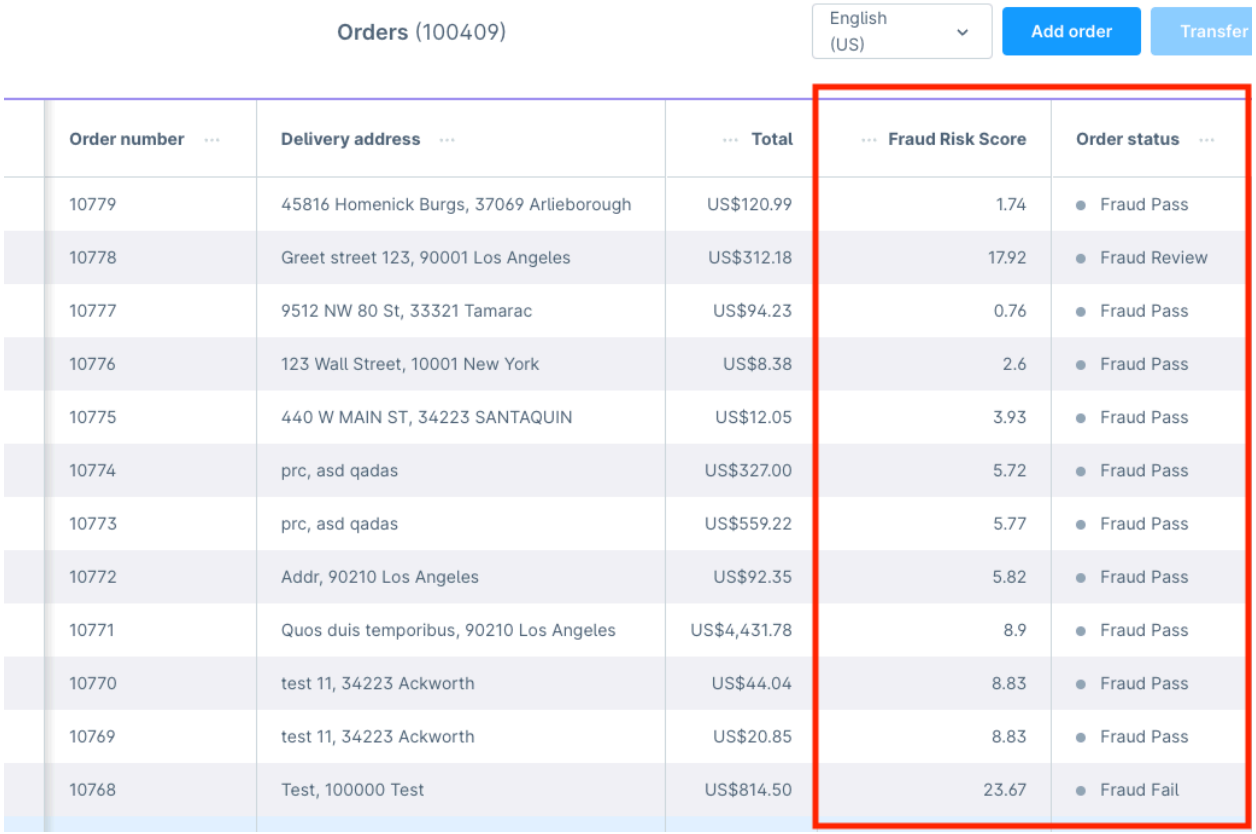
3. How It Works

1. **Customer Places an Order**
    - When the customer checks out, the plugin sends order data to MaxMind's API for a fraud assessment.
2. **Risk Score Calculation**
    - MaxMind returns a Fraud Risk Score (0.01 to 99).
    - If the score is above your configured threshold, the plugin automatically sets the order status to Fraud Review.
    - If the score is below the threshold, the order is automatically marked as Fraud Pass.
    - The Open and Cancel statuses are no longer used in this workflow.
3. **Order Status Update**
    - The Order status field in Shopware will show "Fraud Review" if the risk score exceeds your threshold.
    - You can see this status in the Orders overview page.

4. Viewing and Managing Orders

1. **Navigate to Orders**
   - In the Shopware Admin, click Orders.
   - You will see a list of all orders with columns for Order status, Payment status, Delivery status, and Fraud Risk Score.
2. **Review Fraud Risk Score**
   - Look at the Fraud Risk Score (%) column.
   - Orders with a risk score higher than your threshold will appear as Fraud Review in the Order status column.
   - Orders with a risk score lower than your threshold will automatically be marked as Fraud Pass.
   - The Open and Cancel statuses are no longer used in this workflow.
3. **Manually Changing Order Status**
   - Click on an order to open its detail page.
   - In the General tab, you can change the Order status from Fraud Review to Fraud Pass or Fraud Fail after reviewing the order details.

Orders Overview with Fraud Review & Fraud Risk Score



Order number	Delivery address	Total	Fraud Risk Score	Order status
10779	45816 Homenick Burgs, 37069 Arlieborough	US$120.99	1.74	Fraud Pass
10778	Greet street 123, 90001 Los Angeles	US$312.18	17.92	Fraud Review
10777	9512 NW 80 St, 33321 Tamarac	US$94.23	0.76	Fraud Pass
10776	123 Wall Street, 10001 New York	US$8.38	2.6	Fraud Pass
10775	440 W MAIN ST, 34223 SANTAQUIN	US$12.05	3.93	Fraud Pass
10774	prc, asd qadas	US$327.00	5.72	Fraud Pass
10773	prc, asd qadas	US$559.22	5.77	Fraud Pass

5. Best Practices

1. **Set a Reasonable Threshold**
    - Too low (e.g., 0.1) may flag many legitimate orders.
2. **Too high (e.g., 99) may miss fraudulent ones.Monitor Flagged Orders**
    - Always manually review orders marked as “Fraud Review.”
    - Look for suspicious details like mismatched addresses or unusual email domains.

3. **Keep Credentials Up to Date**
    - Ensure your MaxMind Account ID and License Key are valid.
    - An expired key will stop risk scores from being retrieved.
4. **Stay Current with Plugin Updates**
    - Keep the plugin updated to ensure compatibility with the latest Shopware and MaxMind API changes.

6. Troubleshooting

- **No Risk Scores Appearing**
    - Double-check your MaxMind credentials (Account ID and License Key).
    - Ensure the plugin is enabled for the correct Sales Channel.
- **Orders Not Changing Status**
    - Verify that your Risk Threshold is properly set.
    - Check for conflicts with other order management plugins.
- **Settings Not Saving**
    - Clear Shopware’s cache after saving.
    - Check file permissions if changes don’t persist.

7. FAQ

1. **Is a MaxMind account required?**
   Yes. You need an active MaxMind account and a valid license key for the plugin to function.
2. **Can I limit the plugin to specific sales channels?**
   Yes. In the plugin settings, you can select which channels it should apply to.
3. **What happens to orders flagged as ‘Fraud Review’?**
   You can investigate them and then manually change their status to Fraud Pass or Fraud Fail as needed.
4. **Does the plugin handle refunds or chargebacks automatically?**
   No. It only provides a fraud risk score and sets the order status. Refunds/chargebacks must be managed separately.

8. Conclusion

The MaxMind plugin for Shopware automates fraud detection by assigning a risk score to each order. By configuring a suitable threshold and monitoring flagged orders, you can minimize fraudulent transactions. Keep your MaxMind credentials updated and watch your order statuses to maintain a secure checkout process.
